### If You Own or Operate Regulated USTs, You Need This Course!

This Underground Storage Tank (UST) Operator Training Course is required for fuel storage tank facilities. The EPA has established new minimum training requirements for designated Class A, Class B, and Class C operators to ensure that those who own and operate regulated underground storage tanks understand how to operate and maintain their UST systems properly. The federal regulations dictate that all regulated UST facilities must have a trained Class A, B, and C operator by October 13, 2018.

### UST Operator Classes

For the purposes of UST operator training requirements, three classes of operators have been identified:

The **Class A operator** is typically the manager in charge of resources and personnel and is responsible for operating and maintaining the regulated UST system.

The **Class B operator** is designated by the owner/operator to have day-to-day responsibility for the regulated UST system.

The **Class C operator** is an individual designated by the owner/operator to be responsible for initially responding to emergencies and typically controls the dispensing or sale of regulated substances.

Each regulated UST facility must have a Class A, Class B, and Class C operator designated. All individuals designated as Class A, B, or C operators must, at a minimum, be trained according to the corresponding criteria.

**All attendees are asked to bring their facilities FOI to the training.**
